September 1, 2009 – PRESS RELEASE

### Delkor's Compact New Capstone Cover Flange Seal Carton Closing System

Circle Pines, MN . . . Delkor Systems, Inc., a leader in innovative packaging systems, has introduced a new Capstone Cover Flange Seal Carton Closing System as a line extension of its successful Capstone TriSeal Carton Closing System. The fully-automatic system employs Delkor's precision belt drive technology to accurately position, close and seal cover flange seal cartons at line speeds of up to 150 cartons per minute. The precision positioning mechanism within the new system accommodates a full range of carton sizes and includes counters to ensure reliable, repeatable high-speed production of high-quality consumer packages at profitable production line speeds.

The new system employs a compact (38 in. wide by 104 in. long) inline configuration that enables it to align efficiently with a conveyor bringing cartons from upstream filling operations. It offers optional right or left lid positioning

when entering the system. Construction is of welded mono-frame tubular stainless steel for maximum durability and harsh environment endurance, and a NEMA-12 electrical enclosure is standard.

The Capstone Cover Flange Seal system's Allen-Bradley CompactLogix controls and operator-friendly PanelView Plus 1000 HMI touch screen enable quick and reliable changeovers between carton sizes. It is designed to maximize operator safety with low-voltage control circuitry and redundant interlocked panels.

The Delkor Cover Flange Seal closing system closes cartons using either mechanical tuck or hot glue sealing. A Nordson Corporation ProBlue 10 hot glue dispenser for use with the system is available as an additional option. Mounted on wheels, the dispenser quickly connects to the system and can be wheeled a out of the way when not in use.

Delkor Systems, Inc. designs and manufactures end-of-line automated packaging systems that provide robust, innovative solutions for carton forming and closing, secondary packaging, top load case packing, tray packaging, and robotic palletizing. Delkor automated solutions, coupled with our innovative package material designs and formats, dramatically lower material costs and boost output and productivity, helping customers achieve growth, sustainability, and profitability goals.

Delkor's unique position, among secondary packaging machine builders, as a single-source provider for both packaging materials and equipment is the foundation for our quality and service advantage. Delkor has served North American packaged goods companies for more than thirty-five years, earning our reputation as a trusted provider of dependable, inventive packaging solutions that deliver superior value.

The “*Delkor Difference*” is a responsive, problem-solving approach by which we exceed our customers’ expectations for uptime reliability, safety, and operating efficiencies. Delkor delivers reliable machinery, complementary packaging materials, ongoing technical support, and timely parts availability over the full operating life of our equipment.
