Delkor Belt Drive Tray and Carton Former Provides Quieter, Smoother Operation

Minneapolis, MN (April, 2008)

Delkor has introduced a new belt drive tray and carton former to provide a quieter, smoother operating machine. Eliminating the maintenance associated with the previous drive chain, the belt drive provides a more efficient drive mechanism with the added benefits of a smoother running, quieter machine. Other standard features

include a heavy duty counter balance on each forming head, Allen Bradley MicroLogix PLC, Allen Bradley Panelview 700 HMI, and painted carbon steel or stainless steel “wash-down” construction.

The Delkor tray / carton formers come in three different frame sizes depending on the tray / carton blank size. With the ability to run three heads per machine, the machine is capable of speeds up to 180 trays / cartons per minute. For more information on Delkor’s “Belt Drive” tray and carton formers, please contact us at 800-328-5558, email info@delkorsystems.com
